**The Ultimate Work Gloves**  
Showa Glove revolutionized the industrial glove market in 1994 with the introduction of the Atlas® line of flat dipped gloves. Years of research resulted in the development of a new generation of hand protection that not only increased safety, but also enhanced dexterity, comfort and durability. The innovation of Atlas raised the bar in industrial hand protection and, as a result, remains the world's most popular brand of flat dipped latex palm coated gloves.
